

L250 CONDUCTIVITY DETECTOR II.

1x LED

banana

1x battery

1x

1x

1x resistor 1kΩ

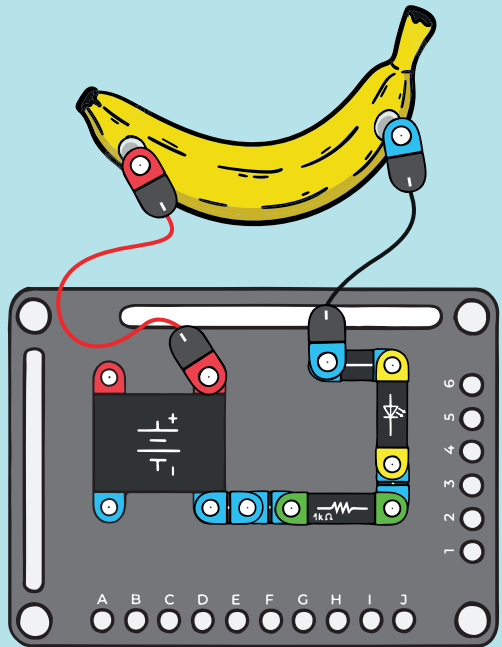

3x

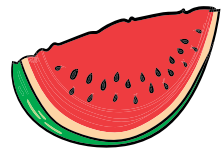

1x

In addition to the human body, which has a high water content, you can test the conductivity of other water-containing things, such as various fruits and vegetables.

Warning: Never test the conductivity of an electrical network where a person could be injured!

Guess what has the highest conductivity?

(Hint: You can eat almost anything with it - except maybe a bread roll.)
